**SIGHT ON SCENE**

---

# IMPROVED **VISIBILITY** FOR EMERGENCY RESPONSE.

Sight On Scene is an integrative safety information application that allows school districts to view and share interactive building maps, live security camera feeds, emergency preparedness plans, and more with first responders and school staff during an emergency. This technology gives police, fire, and EMS a detailed visual of the structure they will be entering before they even arrive on the scene, and empowers school staff with the information they need to confidently respond and act when it matters most.

## **COMPREHENSIVE MAPPING TOOL**

Create interactive building maps with drag-and-drop drawing tools, safety and hazard icons, panoramic images, and access to security cameras.

## **LIVE SECURITY CAMERA FEEDS**

Give responders and staff access to live footage from security cameras in and around the building during an emergency.

## **ESCAPE ROUTES**

Provide staff with the quickest routes out of the building from their location, along with instant snapshots from the security cameras along that route.

## **STUDENT ROLL CALL**

Identify the location of missing students during an emergency via API Integrations with leading student information and attendance tracking systems.

## **PUSH NOTIFICATIONS & CHAT**

Automatically notify users of an emergency, including the emergency type and location, as well as all corresponding updates. Staff can also chat with one another & partnered responder units.

# MONITOR, PREPARE, **PROTECT.**

SOS gives school administrators the ability to condense their existing emergency management strategies into one application. Within this central hub, critical information and immediate updates can be accessed by all staff members during drills *and* actual emergencies. Should a disaster occur, partnered first responders will have familiarity with the district's buildings and preparedness documents, as well as access to a live visual inside and around the site.

## **EMERGENCY PREPAREDNESS PLANS**

Upload and automatically distribute emergency preparedness documents to utilize during safety drills or emergency situations.

## **CUSTOMIZABLE USER ACCESSIBILITY**

Customize and assign individualized feature access to staff & partnered responder units. Time-sensitive access tokens can also be distributed to outside first responders assisting during an emergency.

## **USER ACTIVITY AUDITS**

Meticulously track every user who touches the system and monitor metrics including session dates, logins, map views, and camera views.

## **VIRTUAL WALKAROUND**

Allow security staff and partnered first responders to virtually navigate the building and grounds via live security camera views.

## **TACTICAL MODE**

Give appropriate users access to a visual of all building maps, security cameras, and active chats from one screen via the desktop site.

# UNPARALLELED ACCESS FOR FIRST RESPONDERS

SOS installation is simple and the mapping process for an entire district can be completed in just a matter of days. Districts can then invite local first responders to download the app and receive access to their building maps, security cameras, emergency preparedness plans and more. Best yet, since Sight On Scene is being sold as SAAS, subscribers are regularly granted access to new features as soon as they are available.
